

Do you have a baby 0–10 months old?

Does your baby have a brother or sister
with ADHD and/or autism?

The Studying Autism and ADHD Risk in Siblings (STAARS) project aims to learn more about the early development of babies with a brother or sister with ADHD and/or autism.

We hope our studies will help to improve early detection and diagnosis of ADHD and autism.

Please contact us for more details if you:

- are pregnant or have a baby between the age of 0–10 months
- **and** your baby has a sibling diagnosed with Attention Deficit Hyperactivity Disorder and/or Autism Spectrum Disorder.

Travel costs to central London (WC1) are reimbursed and special arrangements are made for families who live further away.
